### **OneVision incorporates subsidiary in Brazil**

**OneVision Software AG has announced the incorporation of OneVision Software (Latin America) Ltda. in São Paulo, Brazil.**

**Regensburg, Germany (January, 2<sup>nd</sup> 2006)** – OneVision Software AG, one of the leading suppliers of innovative software solutions to simplify print and media production, continues its successful worldwide growth strategy with the incorporation of its first subsidiary in Latin America.

OneVision software solutions are already well established in the publishing industry in Brazil: Seven out of the top ten Brazilian newspapers rely on OneVision software solutions in their daily production. Asura, the solution to automate file correction and optimization in prepress workflows, had already been rewarded beginning of 2003 in 'Desk Top Publishing' as product of the year 2002.

"The fast pace of the economic recovery in Latin America and the growing role and influence of Brazil as a nation on the entire Latin American continent made it a logical decision to choose Brazil for our Latin American operation. Also the growing demand for our products in this area convinced us to invest earlier in this area than we originally planned," states Hussein Khalil, CEO of OneVision Software AG. With this subsidiary OneVision plans to serve the whole publishing and printing industry in Latin America. OneVision Software (Latin America) Ltda. commenced operations on January 1, 2006. Leonardo Romero Velásquez was appointed General Manager of the new subsidiary.

## **Editor's Notes**

### **About OneVision**

OneVision Software AG develops and implements innovative software solutions and concepts aimed at optimizing workflows in print and media production – assisting its clients in improving speed and quality of their workflows, saving time and expense. Corporate headquarters is located in Regensburg, Germany. OneVision Software AG also has subsidiaries in Jersey City (New Jersey, USA), Milton Keynes (United Kingdom), Levallois Perret (France), São Paulo (Brazil) as well as a branch office in Copenhagen (Denmark). One Vision's customers include leading newspaper & magazine publishers, commercial and digital printers, prepress companies, advertising agencies, and industrial enterprises. Founded in 1994, OneVision today is one of the world's leading suppliers of software technologies for print and media production. One Vision's quality management system is certified based on ISO 9001:2000 standards.

### **About OneVision Asura Pro**

Asura Pro is a cutting-edge software package for high-volume and high-quality production offering the most advanced control over automated document optimization. Aware of growing customer demand for seamless integrated workflows, OneVision designed Asura Pro to deploy its unique and innovative JDFnet technology and capitalize on state-of-the-art job ticket standards such as the Job Definition Format (JDF) or XML – depending on your preference. With dynamic job processing via job tickets, Asura Pro makes an important contribution to networked print and media production.

### **About OneVision Asura**

Asura is the leading automated software solution for hotfolder-based control, correction and optimization of files in PDF, PostScript, EPS or TIFF format. Asura automatically takes over document 'prefining', examining file contents, correcting errors on the fly, and providing a detailed log report for each document. Operating in the background Asura does not require any manual operation on the data, preventing insecure documents from burdening workflows in print and media production.

### **About OneVision Solvero**

Setting new standards in high-quality print and media production Solvero is One Vision's editing and post-processing application for PDF, EPS or PostScript documents. Its functionality goes far beyond the capabilities of simple PDF editors. Regarding production issues Solvero measures up to the feature set of modern layout programs – such as text flow and typography as well as color

management and adjustment or positioning and processing of graphic elements and images. Solvero integrates all the functionality for a last-minute check and edit into one application.

### **About OneVision Speedflow Basic**

Speedflow Basic is One Vision's entry-level solution securing and improving PDF workflows.

OneVision Speedflow Basic can automatically optimize files for data transfer and output in print and media production and can hence simplify your printing production. Speedflow Basic consists of two modules that complement one another: Speedflow Check can check the contents of incoming PDF, PostScript, TIFF and EPS files and repair errors automatically. Once the file is processed, Speedflow Check outputs these files as PDF files. Speedflow Edit facilitates the modification and processing of PDF files including all printing components – such as text, images, graphics and colors. The modules can be used together or irrespective of one another at different places and working stations in the production.

### **About OneVision Speedflow Suite**

Speedflow Suite is OneVision's solution for enhanced automation of workflows in print and media production. Speedflow Suite is indispensable in getting standardized documents to run seamlessly through print and media production. Speedflow Suite is not only able to eliminate frequently occurring production problems with incoming files; it also allows imposition of PDF files via its module Speedflow Impose. The Suite incorporates three modules forming an "ideal team" within your PDF workflow. In addition to Speedflow Check and Speedflow Edit, it includes Speedflow Impose as an ideal companion completing the workflow with a fast imposition tool.
