OneVision @ Fespa 2007: PlugINKSAVEin for significant ink cost reduction in large format and digital printing

Regensburg, Germany (June 5, 2007) OneVision Software AG, a global provider of prepress software solutions to the printing and publishing industries is showcasing at Fespa 2007 (booth J335, hall 25, June 5 -9 in Berlin) the latest versions of its software solutions for automated control ("Preflight"), correction and optimization of print production files in PDF, PostScript and EPS format. One highlight is the presentation of PlugINKSAVEin which allows significant ink cost reductions. The software module uses advanced four-dimensional (4D) colour management techniques to reduce the amount of costly CMY ink required in the printing process and maximize the amount of less expensive black ink – without affecting image quality or appearance. PlugINKSAVEin's easy-to-use interface facilitates parameter setting and adjustment without demanding third-party expertise. In addition to significant ink cost reduction, users benefit from enhanced printing quality and increased productivity, as set-up times can be reduced and fan out and web breaks can be avoided.

Gerhard Friedmann, division manager offset print of Georg Kohl GmbH & Co in Brackenheim, is satisfied: "We have tested OneVision's PlugINKSAVEin intensely. The printing quality is excellent and the significant ink cost reduction allows a short pay back period. The easy handling and configuration without additional colour management expertise required has of course influenced our investment decision. PlugINKSAVEin is an ideal complement to our workflow. The combination of ink cost reduction, excellent printing quality and easy handling is convincing. Furthermore, we plan to implement PlugINKSAVEin also in our 4c digital printing."
