OneVision launches newest version of Voyager, its Powerful Software Tool for 24/7 Online File Submission and Approval

OneVision's Voyager helps Publishers and Printers connect their customers 24/7 to their Premedia Department, thus automating processes and reducing the workload

Regensburg, Germany – 30. March 2010 – OneVision, a global provider of prepress and premedia software solutions to the printing and publishing industries, announced the launch of the newest version of Voyager, a software solution designed to automate file submission and approval. Voyager gives end users the ability to easily upload and submit their files 24/7 to publishers and printers. The integrated approval process allows each user to accept or reject the real-time proof online, thus minimizing administrative work for both publishing and printing companies and their customers.

The new version of Voyager has seen considerable improvements in terms of usability, user administration and speed: companies producing a broad range of publications will now find additional controls to help manage workflow path access and user permissions. To further enhance automation, Voyager now offers the possibility to set up multiple hot folder configurations, which extend the use of Voyager for automatically submitting and retrieving processed files (round-tripping). In addition, the speed of Voyager has been increased to provide faster throughput in higher volume workflows.

The latest version of Voyager will be on display for the first time – along with a variety of other software tools specifically designed to streamline premedia operations – at the NAA mediaX-change, taking place April 12-14 at the Hilton Orlando, Florida. At booth #507, OneVision will have product experts on hand to give live demonstrations of the new Voyager as well as other OneVision software solutions.

Visitors to IPEX will also have the possibility to see a demonstration of the new Voyager: from May 18 to May 25, OneVision will be showcasing its software solutions at the NEC in Birmingham, booth #11C240.

OneVision's customers include national, regional and local newspaper and magazine publishers, as well as digital and commercial printers in more than 60 countries.

About OneVision

OneVision's state-of-the-art premedia software is used every day by the world's largest newspapers and magazines, leading publishers, commercial and digital printers as well as companies in the area of on-demand publishing. By streamlining workflows and automating production processes, OneVision's flagship solutions allow organizations to save time, reduce costs and ensure the highest level of quality for printed materials. Headquartered in Germany and with locations in the U.S., United Kingdom, France, Brazil and Singapore, OneVision continues to bring new solutions to companies worldwide.
