

Asura is the leading automated software solution for hotfolder-based control, correction and optimization of files in PDF, PostScript, EPS, XPS or TIFF format. Asura automatically takes over document 'preflighting', examining file contents, correcting errors on the fly, and providing a detailed log report for each document.

The integration of XML and JDF job-ticket technologies, make Asura Pro one of the most future oriented software solutions integrating high volume and high quality production. Adding the functionalities of Plug SPOTin, PlugFITin, PlugCROPin and PlugWEBin to the Asura application, Asura Pro offers the most advanced quality control and automated document optimization.

## Now Seeing is Believing: Visually Identify Problems Quicker and Easier with Asura

### Your benefits from the new PDF Error Report:

- Pinpoint reasons for pre-flight errors in a second
- Fast visualization of problems
- Flexible report presentation based on your needs
- Easier and quicker corrections
- Reduce error rates
- Valuable time savings and cost reductions

## Layered PDF Error Report ...

- displays errors clearly by showing related layers.
- links error elements to respective problems using both text and graphics.
- supplements existing reports in HTML, XML, and ASCII.
- can be generated automatically by Asura 8.0 and Asura Pro 8.0.

## Asura ...

- is adaptable to any workflow and used by any market that handles prepress files.
- catches problem files before they start to cost time and money.
- checks against more than 80 of customizable check options and generates a new structured clean output file.
- offers enhanced color control options: Automatic TAC detection and optional ink coverage reduction, optional rich black removal and extended automatic grey detection.
- supports also new formats like PDF 1.6 and PDF 1.7 in import and export:

Layers can be – either automatically or manually – preserved or flattened depending on your downstream workflow (e.g. PDF 1.3).

From the beginning you have complete control over any already layered content in the file.

- writes a lower version of PDF, EPS, or PostScript than the original so that older equipment can be used without the need to upgrade (e.g. take in PDF 1.6 and write EPS Level 2).
- can create multiple output formats from a single input: save PS, EPS, PDF, TIFF, JPEG, and DCS2 from one input file.
- is able to generate error reports in PDF, ASCII, HTML, and XML (last one only in Asura Pro).
